

PHISHING CAN HAPPEN TO ANYONE!

Did you accidentally fall victim to a phishing email? It can happen to almost anyone, at any time. If you do get hooked by a phishing attack it is critical that you report it right away!

Recognize a Phishing Attack before you take the bait:

There are common clues that can help you identify a phishing attack as soon as it hits your inbox. Be on the lookout for these signs:

Offers that are too good to be true.

Messages that create a strong sense of urgency.

Emails that appear to be work related but use a personal email address, such as @gmail.com.

The language, tone, or signature is inconsistent with the supposed sender.

Emails that pressure you to bypass or ignore our security policies.

Emails that contain a generic greeting such as "Dear Customer."

Messages that try to invoke curiosity or fear.

We know the bad guys can be tricky. If you suspect an email is a phishing attack, or you think that you may have fallen victim to one, help us by reporting it right away.
